

simple ideas create powerful results

Big ideas and little ideas: all create savings

Business today is challenging. Holzma U.S. presents a unique opportunity to see three distinct work environments, each with its own set of cost-saving ideas to help you meet that challenge. These highly flexible parts-production solutions effectively use floor space and can significantly increase your ROI.

- **Custom work cell** for ultimate product flexibility
- **Mid-Range work cell** for production quantities
- **High Production work cell** for volume manufacturing

This event format allows you to see multiple solutions in action in a short time. Presentations inform you about industry trends, new directions in software technology, the latest developments in functional hardware, and the role the tax code can play in helping you buy equipment.

Three concepts...three dozen ideas. We guarantee you'll discover new ideas that can significantly help your company be more competitive and profitable. See in action:

- a variety of software products including Cut Rite
- material handling that's simple, effective, and space saving
- parts tracking, utilizing powerful iConnect software, improving parts flow and eliminating errors
- product labels incorporating RFID chips for ease of inventorying products through shipping and on to the job site
