

## clearing the hurdles of software

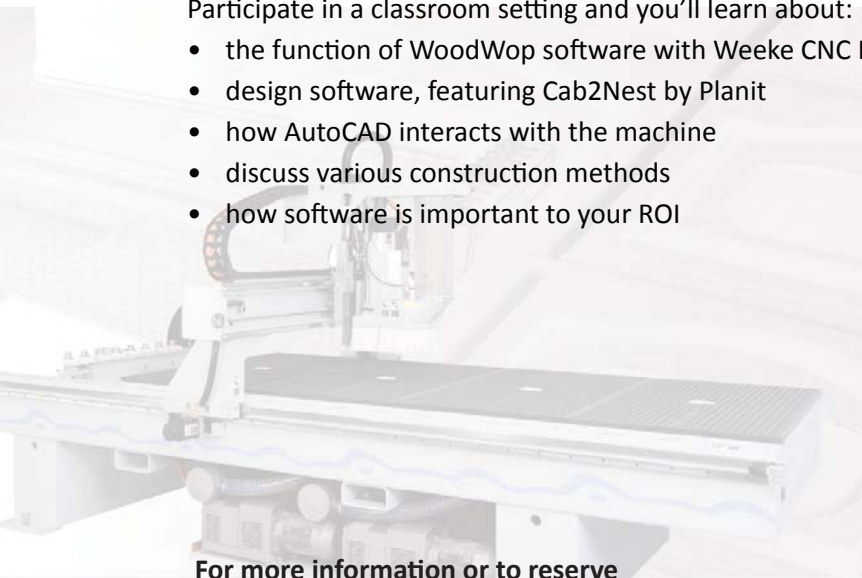

a workshop for nested manufacturing

The prospect of adding a CNC router to your shop is exciting! Understanding the software component, though, may be a little daunting. We can help. Join us for a hands-on learning experience that will offer valuable insights and answer many of your questions. You'll discover that understanding and using software can be easier than you think.

Join our workshop and experience the technology first-hand when you visit us at Stiles Shop Solutions on March 29 - 30.

Participate in a classroom setting and you'll learn about:

- the function of WoodWop software with Weeke CNC Routers
- design software, featuring Cab2Nest by Planit
- how AutoCAD interacts with the machine
- discuss various construction methods
- how software is important to your ROI
