

# Stiles Expo 2012

Highlighting solid wood, sanding & finishing applications

**January 25 - 26, 2012**  
**High Point, NC**

Are your production processes efficient? Can you provide high-quality custom work pieces for your demanding customers without sacrificing your margin? It's never been more important to understand your options than in today's challenging business environment.

Join us for the Stiles Expo 2012 for thought-provoking seminars and cutting edge machine demonstrations. From raw lumber to finished moulding, see it all: ripping, cross-cutting, sanding, and finishing—the entire process is live and in our technology-packed 22,000 sq. ft. renovated showroom and new finishing lab. This is an event you don't want to miss.

Our extensive presentation topics include:

- the introduction of digital image processing for customized finishes
- LED UV technology that can reduce your water borne curing time by half with no heat and less energy consumption
- the achievement of color changes in under 1 minute
- methods to streamline your moulder processes to boost ROI
- and much more!

Complimentary single-night hotel accommodations and lunch are provided. To find out more, or to register, please visit

Our Grand Opening finishing and sanding event held in October 2011 drew over 250 guests with rave reviews.

*"Our guys returned from the past few days with you and your colleagues in High Point and have spent the morning telling us about how impressed they were. They raved about your facility..."*

- Cory Zucker, president  
Kalcor Coatings Company

# Stiles Expo 2012

## Seminar Overview

Knowledge is the key to success. To compete today, you need a solid understanding of new innovations to generate fresh ideas. Learn new processes to make your production run more efficiently and with significantly reduced waste. Stiles presents cutting edge topics to help get you up to speed.

- **Streamlining Your Moulder Set-Up & Operation**

Simple steps in better tool room management and moulder set-up processes can help any moulding operation be more productive. Learn how to achieve faster and more accurate set ups, eliminate or reduce paperwork, and allow the operator to focus more on quality control.

- **New Methods of Using Radiant Energy to Cure Industrial Coatings**

The major shift from solvent to water borne coatings has driven technology changes in curing systems. The new coatings coupled with the demand for more energy efficiency has stimulated new applications of both infrared and UV radiation. Infrared also offers direct benefits to curing conventional solvent based coatings.

- **Industrial Digital Imaging Technology**

Discover a new high speed imaging and protective finish coating process for large formats that creates an opportunity for manufacturers to convert from “mass production” to “mass customization”.

- **Sanding Techniques for the Finishing Process**

Gain a better understanding of the sanding process including moulder and profile sanding, sealer sanding, solid wood and veneer sanding. Discover a variety of techniques to achieve the highest quality results and eliminate sanding defects.

Each of our popular seminars will be offered on both days of the Expo. In addition, work cell demonstrations will be held throughout the event, providing an opportunity to experience the remarkable efficiency gains plus labor and material savings that are possible with this manufacturing concept.
